Online Skype channel. A: If you are looking for one user's activity, I would go with something like this: `SELECT user.user_id, SUM(comment.comment_score) as [Overall Comment Score] FROM comment INNER JOIN user ON comment.user_id = user.user_id GROUP BY user.user_id` If you want to know what are the top 5 comment scores per user, then something like this should do: `SELECT user.user_id, SUM(comment.comment_score) as [Overall Comment Score] FROM comment INNER JOIN user ON comment.user_id = user.user_id GROUP BY user.user_id ORDER BY SUM(comment.comment_score) DESC` Lastly, if you are looking to see what are the most commented topics, I would go with something like this: `SELECT forum_topic.forum_id, COUNT(*) AS [Number of Comments] FROM forum_topic INNER JOIN comment ON comment.comment_id = forum_topic.forum_id GROUP BY forum_topic.forum_id` // Package json provides JSON serialization of AWS requests and responses. `package json import ("encoding/base64" "encoding/json" "fmt" "reflect" "sort" "strconv" "time" "github.com/aws/aws-sdk-go/private/protocol")` // BuildHandler is a named request handler for building rest json payloads var `BuildHandler = requestHandler{name: "build"} // requestHandler is the struct that we can customize json serialization // to fit how the API service expects requests and responses to be sent. type requestHandler struct { name string } // buildRequestHandler is a named request handler for building rest json payloads var buildRequestHandler = requestHandler{name: "buildRequest"} // Build requests the input S3 object to build and returns JSON result as // response body. // Example: // result, err := svc.BuildObject(ctx, params) // if err != nil { // 2d92ce491b`
