missing (living people)Q: Can't upload file
through S3 with js I'm trying to upload a file
through S3 through js. The flow is as follows:
User selects file User submits form File is upload
to S3 File then sends email with a link that user

can click to download The file is being uploaded fine, but the file is not being sent through email. I'm using the following code (taken from the AWS docs):

```
var params = { Bucket:'myBucket', Key:'myKey', Body: file }; AWS.S3.putObject(params).promise().then(function (data) { console.log('File uploaded successfully.'); }, function (err) { console.log('Error occurred.'); });
```

I have also tried including the text as a parameter in the body, but the same thing happens. I'm unable to get the parameter to show in the email. I'm currently doing this through Cloud9 so I'm not sure if that's the reason, but I can't see any messages regarding the email whatsoever.

A: I was able to resolve the issue with this.

```
var params = { Bucket:'myBucket', Key:'myKey', Body: file, ContentType: file.type }
```
