Daimler Details Future of Mercedes-Benz Trucks

Daimler is going to have a tough time getting people to buy new trucks. In an interview with Bloomberg, Mercedes-Benz Trucks group vice president for sales and marketing, Zsolt Pusakai, noted the crucial transition from SUVs and crossovers to trucks. “As crossovers and SUVs became the dominant segment in the past two or three years, the next logical step was to take it to the next level with a truck. So I’d say that the transition is pretty much completed. It’s about 100% complete for our truck division,” Pusakai said. “We can’t go from 100% trucks to zero,” he added. “Obviously trucks have a part in the market.” The remaining pieces to the truck puzzle include opening up the cabin (including the underfloor) and lowering the center of gravity so it’s more comfortable. Pusakai said there’s a lot of potential for technology in the truck, particularly in autonomous driving and in making the vehicle more comfortable and productive. “The current generation of trucks was pretty much built with mechanical engineering. The new generation of trucks will have to combine that with electronics and software. It’s not easy. And we’re not there yet. But we’re making good progress,” he said. “But we have a big head start on the other manufacturers and a lot of companies are interested in our software,” he said. Daimler is also investing in other powertrain technologies, like electric drive trains and hybrids, as well as heavy-duty diesel engines. The Ram 1500, which comes out next year, will have a continuously variable

transmission (CVT) with dual drive modes. “Trucks are the most efficient, most sustainable, safest, most efficient and have the largest potential for savings,” Puskai said. “Now the challenge is not to build trucks, but to sell them. That’s the real problem for us. There 2d92ce491b
