You have the option of uploading a document to the software. [1] The following principles for using the BurnInTest burn-in facility are the result of a worldwide study of more than 150 companies. When using the software, read the operator's manual to find out which rules apply to you. The most important aspects are summarized in the following bullet points. - Understand the application of the test. - Turn on the test as early as possible in the product's lifetime. - Expect the results. - Perform the test to their desired standard. - Use the test on a regular basis, preferably several times a year. - Prepare for any anomalies. - Draw attention to, and track, even small faults. - Consider the cause of the fault and what can be done to remove it. - Carry out the test in a critical-application system. - Use the software on the operating system/hardware the product will be running on. - Assume that an error could result in the destruction of an entire production line. - Take necessary precautions to protect the machine and operator. - Perform the test in a controlled environment. - Use the test equipment the product will be running on. ** Caution: ** This section describes instructions and precautions for running test documents through the BurnInTest software to predict failures. This is not intended as a guide for conducting a test, nor for testing the product. You should consider the instructions a starting point for conducting your own test. ** Note: ** The following paragraphs discuss a system for making a selection decision. You will receive a selection decision (SM, SS, SE, SI) and a report listing the faults that were found during the test, along with the decisions that were made based on the results. The report is a key indicator of the test quality. If you find yourself at a loss, ask your supervisor. He will be able to help you decide how to proceed. In general, the report provides a source of information about the reliability of a product or system. To obtain a reliable report you should perform the test with care, using correct test methods and carrying out the test as prescribed. The following questions will help you find out how you can improve the test. ** Why was the report not very reliable? ** What was the source of the error? ** Were there any procedural problems? ** What do you need to know before you perform the test?

Mar 28, 2020 - PassMark BurnInTest is specialized software for the "baking machine".Download and run the program, click on "Test preferences" in the "Configuration" menu on the main screen of the program, and on each tab ... PassMark BurnInTest is specialized software for the "baking machine".Download and run the program, click on "Test preferences" in the "Configuration" menu on the main screen of the program, and on each tab set the necessary parameters as shown in the image above (image taken from the instructions for PassMark BurnInTest): To do this: 1. Select the "Automatic Test" option to automatically test the system. 2. Select "All Tests" to test all computer items. fffad4f19a
