Q: Pushing a code working with Swift to a Linux Docker container using a.sh script I am trying to push a Swift code to a docker container. It works as expected when I am running it in a docker. But when I am trying to use a.sh script and run it inside a docker container it's not working. Here's the.sh script:

```
#!/bin/bash set -ex cd `dirname $0` SWIFT_BINARY=$1 if [ -z $SWIFT_BINARY ] then echo "Missing'swift' binary" exit 1 fi # Create the test container docker run -it --name test_container -v ${PWD}/test_file:${PWD}/test_file -w ${PWD}/test_file --rm flutre/swift:latest /swift test_file This is what I am getting in the container: > docker exec test_container swift test_file.swift bash: line 17: =: no such file or directory Any idea what is wrong here? A: You should use: -v `pwd`/test_file:/test_file for your docker run command. Your.sh is more like a script that's invoking swift using bash, while you want it to be using swift binary. Try this: #!/bin/bash set -ex cd `dirname $0` SWIFT_BINARY=$1 if [ -z $SWIFT_BINARY ]
```
