A method for obtaining biosynthesis of fosfomycin from actinomycin substrates by the actinomycete Streptomyces albus at the high substrate concentration is described. When actinomycin is used as the substrate, the yield of fosfomycin is 6.8%, and when actinomycin is the nutrient substance, the yield of fosfomycin is 22.4%.[Double peak in the glucose oxidation to CO₂ in rat skeletal muscle mitochondria]. The aim of this work is to search the origin of double CO₂ peak formation during rat muscle mitochondria respiration in the presence of ADP and ATP. The contribution of the complex I of the respiratory chain to the total flux through the reaction and the effect of it on the double peak formation were studied by the addition of antimycin A. The results demonstrate that complex I participates in the reoxidation of the respiratory chain during mitochondrial respiration. When the reoxidation of the respiratory chain by complex I is incomplete, the formation of the double peak can be observed.Q: How to hide/show a form if it contains any invalid field I am a novice at JavaScript. I'm trying to hide a form if it contains any invalid field. I know I have to use document.getElementsByName but I don't know how to do it. HTML code: Pay What I've tried so far: document.getElementsByName('amount').value == '10' A: document.getElementsByName('amount')[0].checked = true; Try this if you want to hide the form. var valid = false; var
