To determine whether a

training program designed to enhance dietitian and nurse bariatric education would improve outcomes for the first and second patients receiving the procedure at a center. At 15 United States sites, 1250 patients who met the prespecified criteria for bariatric surgery were randomized in a 2:1 ratio to either the control group or the intervention group. Outcomes were assessed by the surgeon, dietitian, and nurse after the first and second surgeries and by the patients at the end of the first and second year. Control group patients had better outcomes than intervention group patients in the first surgery for weight loss, dietitian documentation of advice provided, and length of postoperative stay. In the second surgery,

control group patients had better outcomes than intervention group patients for weight loss and dietitian documentation. At 1 year follow-up, intervention group patients in both surgeries had less improvement in weight and more hospital readmissions, whereas intervention group patients in the second surgery had less improvement in weight and more physician visits. The intervention did not improve other outcomes. Two years after the intervention, the first 2 patients in the intervention group had better outcomes than the control group patients in all areas assessed. The training program improved outcomes in the first 2 patients receiving bariatric surgery, although improvement

in the second surgery was not as marked. The present invention relates to a tool for the removal of accumulations of fuel and/or oil, respectively, from an operating internal combustion engine. A standard tool for cleaning accumulations of fuel and/or oil from an internal combustion engine includes a hydraulic pump which generates high pressure by a piston. The pumping action results from the displacement of a crank shaft of the internal combustion engine. When the tool is turned by a handle, the piston is turned with the crankshaft and a medium is removed. It is the object of the present invention to provide a tool of the type described above which is easier to use and more efficient. It is also an object to

provide a tool which can be used with different models of internal combustion engines and which can be manually moved. Some Hollywood stars aren't happy that the "Summer of
