Poleramma Banda Kathalu.pdf The  
philosophical message of this story  
is in its very structure. It is a story to  
tell you something and at the same  
time. Khadir Khodiya Kalidasa.pdf  
Category:1990 novels

Category:1990 Indian novelsQ:  
Facebook API error messages I  
know this has been asked before, but  
I can't seem to find a clean answer.  
I'm using the PHP Facebook SDK to  
build a Facebook app. I'm now

---

looking into error messages returned from the API. For example, when I have a "user not found" error (which I can detect in the Facebook API response), I can do this: if

```
($ret['error']) { echo 'Error: '$ret['error']['message']. "; } Which will show the error message.
```

However, in the user not found case, the API returns: { "error": { "message": "User not found", "type": "OAuthException", "code": 1, "fbtrace\_id": "EQz1zT8bFgKmDAhIGn8..." } }

How can I then detect the error in

---

the API response to show the error message in the PHP script? A:

According to the PHP SDK documentation, you can get an error's message using:

```
$e->getErrorCode();
```

```
$e->getErrorMessage();
```

The `getErrorCode()` method will give you the error's code, and the `getErrorMessage()` method will give you the error's message. with the Executive Committee. The MCC Management Committee oversees the management and overall operations of the charity, and is
