Enter-User-Friendly Key-Sequence for Compiling Source Code After many hours of testing, we realize that developers often have to enter a full key-sequence to compile source code manually, especially for the case where several files are included. In SDE, the Key-Macro lets you define a shortcut key for key-sequence, which can be invoked from a menu item and defined to invoke a shortcut key-sequence in file. This is much more handy than typing whole key-sequences, especially for novice users. Just the Keys you Need Imagine that you have lots of source code files (beyond your memory capacity to memorize), and you need to compile it one by one. Just think of searching for all occurrences of a keyword, and you can't find it, then you have to compile all files again. By using the Key-Macro, you only have to type "open files"; all files are opened in the editor window in that way, so you can edit the file. If you type "compile" after typing "open files", all files are compiled in one step. So, you can save a lot of time, and it is a good idea for novice users. KEYMACRO Features: 1. Pre-Defined Key-Sequence Define shortcut key-sequence for compiling. 2. Auto-Completion For example, type "open" then "key" or "open files", the file opens in the editor window. 3. Set the Keyboard to Menu Item You can also define the menu item that will be invoked when you hit the shortcut key on the keyboard. 4. Configure Editor Window A SDE specific menu item lets you change the editor window (the output window) to any other text editor. 5. Profile Integration If you want to customize the shortcut key-sequence, you can create a profile and set the profile to be invoked when you hit the shortcut key on the keyboard. 6. Ease of Use You can drag the file list to be opened in the editor window to the editor window. 7. Advanced Features You can define the output window, and you can select the files to be opened in the output window KEYMACRO Screenshot: 1. Define the shortcut key-sequence 2. Set the keyboard to open a file list 3. Configure output window Usage Screenshots: File List Setup 1d6a3396d6
