What's New in the?

The software package consists of the e2mr database, administrative forms and reporting module to manage and report on patient data and images. The forms can be printed or written on a graphics card using the font settings for the desired text, or it can be stored in the database to be recalled from the database at any time. The database is secured, and password protection is optional. The program can be installed on a server so that other users can access the patient data. The patient data can be captured and uploaded from any data source, including PDAs, Palm Pilots, mobile phones, email, FTP, etc. An inbuilt electronic data capture module enables secure entry of medical data. The administrative module has all the necessary data entry forms, reports, print or print on a card from the database and will comply with all HIPAA data security regulations. Features: Clinical chart templates can be customized and attached to the patients with their ICD-9CM/ICD-10 codes. The templates capture complete information on demographics, vital signs, laboratory results, diagnoses, treatments, procedures, discharge diagnosis and any other pertinent data with the appropriate coding systems. Image acquisition can be done from cameras, video card, scanners, graphic files, screen captures, etc. The image files are stored in the database and can be attached to the patient record as thumbnails, or as full image size for easy display. The software provides for integration with EMR systems such as Notes Plus, NetMD, DynaMed, etc. The software has a card printer option which can print any data into a standard format. Also, data can be downloaded from the database and saved to the PDAs or mobile phones. The E2MR software and the database software are highly customizable and the database can be customized with regard to the name of the database, database fields, graphics, pictures, etc. Any number of patients can be uploaded from the interface to the database, and are labeled with their unique database identifiers. These can be automatically retrieved from the database at any time. The reporting module has all the required forms for reporting patient data from the database. The database can also be accessed using any query tool such as MDView, JetForm, Excel, etc. Desktop Medical Records By: DK Software Review Star We provide a range of software packages for the complete recording and maintenance of your medical records.
