A novel mutation in FANCB associated with immune deficiency, autoimmune manifestations, and Fanconi syndrome in an Iranian patient with suspected Bloom syndrome. Fanconi anaemia (FA) is an autosomal recessive disorder characterized by multisystemic manifestations and is well-known to be associated with a wide spectrum of clinical phenotypes. Although several genes have been identified as causative of FA, there are a group of patients with FA-like phenotype who have no mutations in any of the known FA genes. The Fanconi syndrome has not yet been described in FA; however, it is reported to be associated with many recessive genetic disorders. A 6-year-old boy was referred to our hospital with photosensitivity, skin hyperpigmentation, lymphadenopathy, recurrent mucocutaneous infections, and severe thrombocytopenia. Due to physical symptoms and severe thrombocytopenia, suspected diagnosis of FA was made and the diagnosis was confirmed by molecular analysis of FA genes. The patient was hospitalized for 7 days for transplantation of allogeneic bone marrow. Genetic analysis showed compound heterozygous mutations in FANCC (A1901G; Y664C) and FANCD2 (G490E; G981S). Moreover, his second son was also affected with the same manifestation. Patient's parents were healthy and had normal platelet count and no history of mucocutaneous infections. The patient also had many features of autoimmunity, like alopecia, abdominal pain, and paronychia. He also developed Fanconi syndrome. For the first time, we report a novel compound heterozygous mutation in FANCD2 in a patient with FA-like phenotype. Further evaluation of patients with symptoms of FA-like phenotype should be undertaken to determine the genotype and phenotype correlation.

Simple design to count the time spent on your everyday activities. Pros Tracks all tasks individually. The interface is very friendly. Tracks the time spent on each activity. A simple and easy to use design with minimum settings. Cons Doesn't generate reports. No option to import data from other programs. No option to export. Only one activity is tracked at a time. Chrome might not display correctly. MuayTime was last modified: April 29th, 2019 by Milos Varanković
The object of the invention is a heating apparatus for use in a furnace of the kind described in the introduction, comprising a valve chamber, into which the gas to be heated is admitted, and a valve insert for opening and closing a gas passage, the valve insert comprising a valve plate which can be moved back and forth with a first, directed movement along a longitudinal direction of the insert, and a second, perpendicular movement. The valve insert is so arranged that its second movement causes the gas to be heated to flow through the valve chamber, while its first movement causes the gas to flow through the valve chamber in the opposite direction, thus achieving a shutting of the gas passage of the insert. The valve insert is closed in this way, before a cut-out in a furnace wall has been closed. This ensures that the flow of heat from the furnace walls into the valve chamber is prevented, which avoids the risk of the material in the furnace, the furnace lining and the combustion chamber, being heated by the furnace walls and thus causing damage to the furnace. The idea of a valve insert arranged to be moved back and forth with two perpendicular movements is known from U.S. Pat. No. 4,993,766. The idea of moving back and forth with a first directed movement is, however, new and forms the subject matter of the present invention. A suitable gas to be heated may be a gas of a metal which is to be smelted, e.g. aluminum. The valve insert is, however, not restricted to this, and may also be used for other materials or products. It has been found that the valve insert is best suited to the situation if the first movement is effected by means of an electromagnet. The advantage of this is that the valve insert is capable of being moved back and forth repeatedly and quickly, thus making it possible to achieve quick

Best Music Player Any luck with a music player? I use the Windows 8 Music app and I'm loving it! It is clean, intuitive and fluid – as well as being more feature-rich than the Windows 8 Music app. But, this is not to say there is nothing wrong with the Windows 8 Music app. There are a few things that the Music app does better than Windows 8 Music. Play Tracks Faster The music app is significantly faster at loading tracks than the Windows 8 Music app. Here's how I found it: I removed my iMac's hard drive and booted into Windows 8. I then loaded the music app, and started to listen to some random songs. Every single time it would take around 30 seconds to load a track, and it would take 3-5 seconds for the app to show the track information. I quickly found that the process of searching for songs was also slower in the music app than the Windows 8 Music app. This is because the music app has to download songs from the Internet. Play Less The music app has fewer music options than the Windows 8 Music app. The music app doesn't allow you to choose the genre of music, unlike the music app. This is probably a good thing, because if I can't find what I'm looking for on the music app, I can always go to the Windows 8 Music app. Songs are more organised The music app's songs are organised by their album, which makes it much easier to find songs from a particular artist. When I download a song, it's just that – a song – and doesn't have a name attached to it. Therefore, when I search for a song, I can look through the entire music app and find it much more easily. Songs played on the Windows 8 Music app show the original artist's name, however, this is not the case with the music app. Find a Song The music app has an inbuilt search feature that works well, allowing you to quickly find songs based on their title or artist. These are just a few of the things that make the music app a little better than the Windows 8 Music app. I just hope this is the case of Microsoft improving the music app and incorporating the same kind of features. Kiosk Mode I keep hearing about Microsoft's Kiosk Mode, and how it could be used to provide a Windows 8 OS on touch-enabled devices. Some people are saying that it's the future of Windows 8, while others are saying that it's just a red herring. However, if you really want to know, the Windows 8 Kiosk Mode is built on top of the Windows 8 Laptop Mode, as Microsoft has told us: Windows 8 has a built in prototype of Kiosk Mode, and
