When I was setting up my first Carla project, I really didn't have to touch the sliders at all. As I wanted to do some classic processing, such as reverb and limiting, the defaults worked pretty well. Doing a lot of MIDI I/O, I configured the controls in the MIDI View window. I found that the most useful controls were: Reset the control when MIDI data was coming in. Enable Midi CCs. Enable MIDI out. Racks In Carla, audio plugins are grouped by "racks", which makes it easy to manage a group of different plugins. Each rack must be registered as a separate Client to the Carla instance. By default, the instance of Carla will host all audio plugins, and all DSP plugins, unless the instance is stopped. The first plugin in any rack is the Master plugin. It is by default, as we are instructed to have our first plugin in a rack be our Master plugin. Multi-Channel and Single-Channel Processing The default configuration for any rack is mono. This means that Carla will host the plugins in the order that they are specified.
