Note If the layer is not active, press Ctrl+Alt+N (?-Option-N) to make it active. The layers palette is the place to learn more about layers. The image on the left is a single layer with no active layers present. The image on the right has active layers containing shapes and bitmaps. In the upper section of the layers palette, the Layers Panel is activated. In the Layers Panel, you can see the layering of layers. The layer palette displays the current active layer. If you select an entire layer, it becomes active. If you deselect a layer, the layer becomes inactive. If you double-click on a layer, it becomes active. Selecting to deselect a layer reverses its state. You can also create new layers by clicking the New Layer button. If you're working in a new document, or a New document is active (the default mode), new layers are created when you click on a new area of your image to edit. You can, however, create new layers in any document window. You can also rename your

B) Tool: Marqe Source: To draw with a brush in Adobe Photoshop is the same as drawing with a crayon and a few other basic tools. There are a number of ways to select a brush, but the most commonly used technique is to click with your cursor over the brush, which makes the brush a temporary selection. You can also drag a brush onto an area on your screen where you want to paint, as if the brush were a crayon and you were drawing a picture. When the picture is complete, you need to make it permanent by choosing one of the preset options. Once this is done, you can copy the picture or draw over it again by selecting it with a different brush. When you use a brush you can vary the radius of a brush tip, its color, opacity and size. All the above mentioned parameters can be changed by holding down the Ctrl or Command key while using the Brush. The brush you choose determines the outcome of your painting. There are three types of brushes which are described in the following: The Traced Brush is a clone brush that uses a single point as a starting point. It has a rectangular shape. The color of the stroke depends on the color of the pen on which it was traced. A traced brush is a very useful tool to fill a photo with a cool color. The Bucket Brush is a circular brush, with one or more points that are arranged in a circle. The color of the brush depends on the color of the pen on which it was traced. It may be used to copy colors or change the color of an image or a layer. You can move the cursor on the canvas to move the circle. The Spray Brush is a brush that sprays out a fine stream of paint over the entire canvas. The spray is colored by the color of the pen on which it was traced. The Brush Tip Shape determines what kind of point you paint with. There are 3 different shapes to choose from: Pencil, Round and Square. When you use a pen tool, you will find a selection box on the canvas where the pen has ended its writing. When you click in a new place on the canvas, you will be asked to select a new color. There are 3 different types of color sampling tools: Color Wheel, Color Picker and Overlapping. The Color Wheel has a circular hue slider in the center. If you click and drag a cursor around the dial, your pen will move along
