Roblox is an online game platform and game creation system developed by Roblox Corporation that allows users to program games and play games created by other users. Created by David Baszucki and Erik Cassel in 2004 and released in 2006, the platform hosts user-created games of multiple genres coded in the programming language Lua. For most of Roblox's history, it was relatively small, both as a platform and a company. Roblox began to grow rapidly in the second half of the 2010s, and this growth has been accelerated by the COVID-19 pandemic. Roblox is free to play, with in-game purchases available through a virtual currency called Robux. As of August 2020, Roblox had over 164 million monthly active users, including more than half of all American children under 16. Although Roblox has received generally positive reviews from critics, it has faced criticism for its moderation, microtransactions, and exploitative practices directed toward children. In this review, we will discuss the advantages and disadvantages of Roblox. Roblox has more than 160 million monthly active users as of August 2020. The game is free to play. There are more than twenty genres available in the game, such as arcade, social, survival, arena, etc. Besides game building, you can share your creations on platforms like YouTube, Twitch and Facebook in order to get feedback from your friends. This is a good way to know what you can improve as a game developer. The virtual currency of Robux can be earned by watching videos or playing games. You can also exchange games, such as those available in the marketplace, and Robux. If you have an account, you can save users' games, and it will allow you to play them any time without spending Robux. Roblox is now increasing its penetration in China, and it is the second number in terms of downloads. There are billions of game scenarios created by players

I did some searching online and only found plugins for Firefox or other programs. I was wondering if there is a library or something that can do it. Thank you!

A: I would recommend this Nokogiri plugin, which uses the Google search API to search for HTML and extracts all the results, and then uses CSS to perform a nice and simple query and display only the part you want. There's also this, which is a slightly shorter version.
